Course c	ode	Course Name	L-T-P -Credits	Year of Intr	oduction			
EE401	l	<b>Electronic Communication</b>	3-0-0-3	2010	6			
Prerequisite: Nil								
Course Objectives								
• To introduce the applications of communication technology.								
• To understand the methods and techniques used in communication field.								
Syllabus:								
AM and I	AM and FM fundamentals-AM and FM transmitters and receivers-Television and radar systems-							
Digital co	mmu	nication-Satellite communication-Cellu	ılar telephone.	ANA				
Expected	outo	ome		11.1.1				
The stude	The students will							
1.	1. Understand the need of modulation in transferring a signal through either wireless or							
ii	wired communication systems							
11.	con	able to apply analog modulation technic	ques and receiver runu	amentais in ai	lalog			
iii	Be	to apply baseband digital encoding & d	ecoding techniques in	the storage / t	ransmis-			
	sio	of digital signal through wired channe		ane storage / a				
iv.	Un	lerstand the performance of communication	ation systems in the pro-	esence of nois	e and in-			
	terf	erence	•

	1	Course	Plan					
Module		Contents		Hours	Sem.			
					Exam			
	A 7 1	1 FM from January 4 - Ja			Marks			
I		Erequency spectrum vector repres	entation nower relat	ions				
	AM – Frequency spectrum – vector representation – power relations							
	50		V D D	0	1570			
	FM	- frequency spectrum - power relation	S					
II	AM	and FM transmitters and receivers						
Block diagrams of low power and high power AM transmission - AM								
	receivers: straight receivers super hetrodyne receiver - choice of			e of				
	intermediate frequency - simple AVC circuit		8	15%				
	Bloo	ck diagrams of direct FM transmitter and	nd Armstrong transmit	ter -				
	FM	receivers (balanced -	1 \					
	slope detector and Foster-Seely discriminator only).							
FIRST INTERNAL EXAMINATION								

ш	Television and radar systems Principles of television engineering - Requirements and standards – need for scanning - types of camera tubes and picture tubes - B/W and colour systems - PAL - CCTV - Cable TV-high definition television. Radar and navigation: principle of radar and radar equation, block schematics of pulsed radar.	8	15%			
IV	<b>Digital communication:</b> Principles of digital communication – - Sampling process-pulse modulation Techniques- sampling process-PAM, PWM and PPM concepts - PCM encoder and decoder Applications of data communication	6	15%			
SECOND INTERNAL EXAMINATION						
V	Satellite communication					
	Multiple access (MA) techniques-FDMA, TDMA, CDMA, SDMA - applications in satellite communication wire, MA techniques applications in wired communication. in satellite communication, earth station; Fibers – types: sources, detectors used, digital filters, optical link	8	20%			
VI	Cellular telephone - Basic concepts, frequency reuse, interference cell splitting, sectoring, cell system layout, cell processing. Fibers – types: sources, detectors used, digital filters, optical link: Bluetooth, Zig-Bee, GPS, Wi-Fi, Wi-Max based communication	6	20%			
END SEMESTER EXAM						

## QUESTION PAPER PATTERN:

Maximum Marks: 100

Exam Duration: 3Hourrs.

**Part A**: 8 compulsory questions.

One question from each module of Modules I - IV; and two each from Module V & VI. Student has to answer all questions. (8 x5)=40

**Part B**: 3 questions uniformly covering Modules I & II. Student has to answer any 2 from the 3 questions:  $(2 \times 10) = 20$ . Each question can have maximum of 4 sub questions (a,b,c,d), if needed.

**Part C**: 3 questions uniformly covering Modules III & IV. Student has to answer any 2 from the 3 questions:  $(2 \times 10) = 20$ . Each question can have maximum of 4 sub questions (a,b,c,d), if needed.

**Part D**: 3 questions uniformly covering Modules V & VI. Student has to answer any 2 from the 3 questions:  $(2 \times 10) = 20$ . Each question can have maximum of 4 sub questions (a,b,c,d), if needed.
